

Use-Case Scoring Matrix

Tirion sample asset

Purpose: compare AI use cases before pilot or procurement.

Dimensions: value, data classes, owner readiness, risk, time-to-value.

Score 1-5 for business value, process clarity and repeatability.

Score 1-5 for data readiness, permissions and evidence availability.

Score 1-5 for risk, human review need and operational reversibility.

Flag blockers: sensitive data, missing owner, unclear system boundary.

Rank outcome: start, stop, rescope, pilot or defer to security review.

Use the matrix to make trade-offs visible before budget pressure rises.

Output: start, stop, rescope or controlled pilot.

No client data. Example structure only.
